

Week Eight Project; A Day Out At The Zoo

Meet the Team!

- **Design: Elias Sadek**
- **SCRUM Master: Elias Sadek**
- **Software Development: Elias Sadek**
- **Testing: Elias Sadek**
- **Voice Acting: Elias Sadek**
- **Web Design: Elias Sadek**

QA Journey

- **What I've learnt:**
- **JavaScript – Front end scripting**
- **HTML5 and CSS – Front end style**
- **Mockito – Used with unit testing**
- **SpringBoot – Used to integrate Java and JavaScript**

Testing

- **Coverage: 85.2% at time of writing**
- **Two unit tests, Service and Controller. Other units have minimal functionality outside of initialisation.**
- **One integration test, run off Controller.**

Sprint Review

- **What was done during sprint?**
- **Three sprints: pre-code, code, and stretch goals.**
- **All Must and Should tasks met. Front end Could tasks half done.**
- **Goals were hit mostly with plenty time to spare. Occasionally, items I'm less practised with caused a small delay, but nothing massively disruptive.**

Sprint Retrospective

- **Improved time management over last project.**
- **Help was asked for when needed, another improvement.**
- **On occasion, fell too easily into tackling other's problems rather than my own, but I still managed to complete in advance.**
- **Changing file structure meant git hub is messy.**

Conclusion

- **All in all, an improvement on last project.**
- **I'm happy with how the website came out, and is functional.**
- **The only issue that stands out is the website resizing, which is something I wanted to do.**
